

SMART FINANCE

AI ASSISTANT

PocketSmart AI

Your Smart Budget & Recommendation Assistant

The Problem

Budget Complexity

Planning purchases and events within a fixed budget is difficult — different requirements demand different allocations.

Platform Fragmentation

Users must compare products and services across multiple platforms manually — a time-consuming process.

Preference Matching

Finding products that match both budget and personal preferences is challenging — especially for home interiors, parties, or jewelry.

PocketSmart AI – Our Solution

GenAI-Powered Intelligence

PocketSmart AI is a Generative AI-powered budget and recommendation assistant that delivers personalized suggestions based on your budget, preferences, requirements, occasion, and even optional image input.

Powered by **Gemini 1.5 Flash Pro**, the engine understands context and generates recommendations tailored to your needs — instantly.

Home Interior

Party Planning

Jewelry

Key Features

Home Interior Planner 🏠

Budget-based furniture and decor suggestions

Room-wise requirement planning

Recommendations by style, functionality, and price

Party Budget Planner 🎉

Smart budget allocation by category

Guest count and event type aware

Food, venue, and decoration suggestions

Jewelry Budget Planner

Budget and occasion-based recommendations

Style preference matching

Optional outfit image analysis

How PocketSmart AI Works

Select Planner

Enter Budget

Upload Image

Process Request

The system routes each request through a FastAPI backend to the Gemini AI engine, delivering contextual recommendations in seconds.

System Architecture

Intelligent Request Routing

Requests are routed to specialized planners based on user selection. Each planner is optimized for its specific use case, ensuring highly relevant and context-aware recommendations.

Frontend Layer

Captures user inputs including budget, preferences, and optional images.

Backend Layer

FastAPI handles secure, efficient communication between UI and AI engine.

Sample User Scenarios

Home Interior

₹50,000 budget

User specifies living room requirements → AI suggests suitable furniture, decor, and products within budget, matched to style preferences.

Party Planning

₹1,00,000 · 50 Guests · Birthday

AI intelligently allocates budget across food, venue, and decorations — optimized for the occasion and guest count.

Jewelry Selection

₹10,000 · Wedding · Outfit Image

AI analyzes the uploaded outfit image and recommends matching jewelry pieces within the specified budget and occasion.

User Interface & Results

Seamless User Experience

From login to personalized results — every step is designed for simplicity and clarity.

01

Login / Register

Secure user authentication and onboarding

02

Dashboard & Planner Selection

Choose from Home, Party, or Jewelry planner

03

Input & AI Recommendations

Enter details and receive AI-generated results

04

Recommendation History

Review and revisit past planning sessions

Conclusion

PocketSmart AI brings the power of Generative AI to everyday budget planning — making it simpler, faster, and smarter.
